Visual LISP The AutoCAD visual LISP programming language provides more complex control structures and support for variable assignment and arrays, and supports extensive object-oriented programming capabilities. The Visual LISP language is accessed through Visual LISP Studio, which can be used either as a stand-alone application or in conjunction with Visual LISP for Autocad. The Visual LISP language is executed in a separate application (a Visual LISP IDE) rather than being integrated into the application. Visual LISP code can be executed using LSP files or .lsp files. In contrast, AutoLISP is integrated into the application. The Visual LISP language supports object-oriented programming. The LSP files contain a definition of the Visual LISP code that will be executed, whereas the .lsp files contain source code. AutoLISP AutoLISP is a native, scripting programming language that is supported by AutoCAD 2010 and AutoCAD LT 2010. It is included as part of the Autodesk Design Suite but is separate from Autodesk Design 360. AutoLISP can be used to perform an entire range of general purpose tasks including drawing generation, plotting, data collection, and annotation. AutoLISP's ability to handle drawing objects enables the creation of custom objects, including drawing layers, text, hidden objects, table controls, and dimension-based controls. The draw subroutine is included in AutoLISP as well as a number of drawing objects including arc, arrow, circle, connect, curved polyline, drawing lines, and polyline. AutoLISP is not a separate programming language. It is a language which can be used to create other programming languages. AutoLISP is a successor to Visual LISP, which used the .lsp files format. This format was then extended by the AutoLISP programming language.
